- E I don't know

```
3. try {
    System.out.print("one ");
    if(1 == 1) {
        throw new Exception();
    }
    System.out.print("two ");
} catch(Exception e) {
    System.out.print("three ");
}
System.out.print("four");
```

one three four

What would be displayed to stdout by the preceding code snippet?

```
4. try {
    System.out.print("one ");
    if(1 == 2) {
        throw new Exception();
    }
    System.out.print("two ");
} catch(Exception e) {
    System.out.print("three ");
}
System.out.print("four");
```

one two four

What would be displayed to stdout by the preceding code snippet?
